Build error with assembling startup.s - can anyone help?

Hi,
Currently the computer that has been loaned to me during my unemployment runs SUSE Linux, so when ever I do the labs for this embedded systems class, I borrow a lap top that belongs to my 11 year old son that has a copy of Windows 7 on it where I have done all the labs, since Keil runs only on Windows at this time. I'm a bit behind and currently I'm working on Lab 9. I am taking this class as somewhat of a review given I've both worked and taken classes in this area before, but I'm home unemployed now and decided to get to know your system. A week or so ago, my son had some trouble with the lap top, having downloaded things by mistake that he should not have done, and my husband cleaned it up for him. While doing that, I am wondering if my husband by mistake deleted a file I may need to build the target with Keil, since in no previous lab have I received the following error. My husband mentioned "he may have deleted something related to Keil but he is not sure" while cleaning up for my son.
I did try re-running the TExaSpatch that was released a few weeks ago, and I also made a copy of the TExaSware and Labware directories and re-ran the TExaS_Install2 but this did not fix the problem. I really do not know what is wrong here with assembling startup.s but I'm guessing it has something to do with something my husband "cleaned up" last week. I did not re-run the mdk473.exe that re-installs the Keil uVision IDE. Is this what I should do to correct this problem? The error you see below is with the failed to execute 'C:\Keil\ARM\ARMCC\bin\ArmAsm' while building target for Lab 9, assembling startup.s.
Thank you for your help and patience! :-)
Build target 'Lab9'
assembling startup.s...
--- Error: failed to execute 'C:\Keil\ARM\ARMCC\bin\ArmAsm'
".\Lab9.axf" - 1 Error(s), 0 Warning(s).
Target not created

lab9

driver_installation

keil_installation
